

Functional Requirement Document (FRD)

Rajasvi Decor CRM

Discussion With: Hemant Sir

Date: 03-09-2026

Project: Rajasvi Decor CRM

1. Objective

Develop a CRM for Rajasvi Decor to manage the complete process from **Lead/Contact** → **Follow-up** → **Customer Requirement** → **Sampling** → **Procurement/Sales** → **Reporting**.

2. Lead & Contact Management

The CRM should capture leads from:

- Manual uploads
- Google Ads
- Facebook
- Instagram
- Other configured sources

New leads should support **manual or automatic allocation** to sales users. Assigned users should receive an alert and be able to update follow-up and lead status.

3. Product & Pricing

Product Master

Maintain all products such as candles, perfumes, and other aroma products.

Price Master

Maintain product-wise prices for use during requirement, sampling, and sales transactions.

4. Customer Requirement

When a customer shows interest, the sales user should create a requirement containing:

- Customer/Company Name
- Point of Contact
- Mobile Number
- Product(s)
- Required Quantity
- Procurement Requirement
- Sampling Requirement
- Delivery Address

A single requirement should support multiple products with different quantities.

5. Sampling Management

The system should allow users to create and track sample requirements against a customer requirement.

Sampling details should include:

- Product
- Quantity
- Price
- Free/Paid Sample
- Point of Contact
- Mobile Number
- Delivery Address

The sampling address and contact details may differ from the customer's original details.

An invoice/document should be generated for every sample transaction, including both free and paid samples, to track sample quantity and value.

The system should track:

- Total samples issued
- Free samples

- Paid samples
 - Product-wise sample quantity
-

6. Procurement & Sales

After sampling or requirement confirmation, the customer may proceed with procurement.

The system should maintain:

- Customer/Company
- Product
- Quantity
- Price
- Total Value
- Delivery Details
- Procurement/Sales Status

The system should support comparison of **targeted procurement vs. actual procurement/sales**.

7. Stock Management

The CRM should provide product-wise stock visibility and track stock movement through:

- Sampling
- Procurement/Sales

The system should show available and remaining stock.

8. Process Flow

Lead/Contact → Allocation → Follow-up → Interested → Requirement → Sampling → Sample Dispatch → Customer Evaluation → Procurement/Sales → Stock Update → BI Reporting

9. BI & Reporting

The system should provide management reports covering:

Lead Performance

- Total Leads/Contacts
- Interested Leads
- Follow-ups/Calls
- No Response
- Procurement Conversions

Sampling

- Total Samples
- Free vs. Paid Samples
- Product-wise Sample Quantity
- Sampling-to-Procurement Conversion

Procurement/Sales

- Target vs. Actual Procurement
- Product-wise Sales
- Quantity Sold
- Sales/Procurement Value

Stock

- Available Stock
- Sample Consumption
- Sales Consumption
- Remaining Stock

10. Required Masters

1. Product Master
2. Product Price Master
3. Lead Source Master
4. Customer/Company Master
5. CRM Status/Stage Master
6. Stock/Inventory Master
